EDUCATION

SaiGon University

Software Engineering

2022-2027

Current GPA: 3.27/4.0

SUMMARY

Highly motivated Software Engineering student with a strong foundation in backend development, database design, and API integration. Knowledge in Java, C#, and PHP with hands-on experience building scalable web applications. Seeking a Backend Engineer Internship to leverage technical skills, learn from experienced professionals, and contribute to impactful projects.

TECHNICAL SKILLS

Languages: Java, PHP, C#, JavaScript (ES6+), SQL, TypeScript

Frameworks: Spring Boot, Laravel, .NET Core Web API, React

Databases: MySQL, SQL Server, Redis (Caching)

Tools & Technologies: Git/GitHub, Docker, PostMan, Ollama, RESTful API, WebSocket, RabbitMQ

Language: Capable of reading technical documentation and basic communication.

PROJECTS

Volunteer Campaign Hub | *Java, MySQL, Redis, RabbitMQ, WebSocket, SpringAI* Sept 2025 – Dec. 2025

- Implemented a Retrieval-Augmented Generation (RAG) pipeline via **Spring AI**, utilizing **Ollama** for vector embeddings and **Gemini** to deliver highly relevant, context-aware campaign recommendations.
- Integrated **Gemini AI** (via **Spring AI**) into the real-time chatbox to act as a smart assistant, providing users with personalized and context-aware volunteer campaign recommendations.
- Developed a centralized platform for managing charity campaigns, volunteer registrations, and donation tracking.
- Built an analytical dashboard to visualize campaign progress and financial transparency for donors.
- Implemented a real-time chatbox using **WebSocket** to facilitate seamless, instant communication between volunteers and campaign organizers.

Tour Management Platform | *PHP, Laravel, MySQL, Cloudinary, REST API* Jan. 2026 – Apr. 2026

- Architected a comprehensive tour booking system featuring a dynamic Role-Based Access Control (RBAC) mechanism for flexible permission management and customizable user roles.
- Designed an optimized database schema for complex search filters including location, price range, and availability using Eloquent ORM.
- Utilized **Cloudinary** for efficient media management and implemented secure authentication using Laravel Sanctum.

Movie Ticket Booking System | *C#, .NET Core, MySQL, REST API* Apr. 2026 – Present

- Developed robust RESTful APIs using **.NET Core** to manage cinemas, movie showtimes, and user bookings, adhering to clean architecture principles.
- Designed and optimized relational database schemas in **MySQL**, utilizing Entity Framework Core for efficient data access and management.
- Implemented database transaction management to ensure data consistency and prevent conflicts during the seat reservation process.
- Integrated secure user authentication (JWT) and automated ticket confirmation via email using **MailKit**.
